Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Non-endogenous constitutively activated human G protein-coupled receptors, useful for identifying agonists for use as pharmaceutical agents.

Example 1; Page 307; 341pp; English.

The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-AAY90677 and AAY90681-Y90681-Y90680-YPO681-YPO681-YPO681-YPO681-YPO681-YPO8

```
LUPA, and is preferably Lys. When the endogenous residue at this position is Lys, this residue is replaced by His, Arg or preferably Ala. The 15 amino acid stretch between the substituted amino acid and the Pro may be endogenous, non-endogenous, or a mixture of endogenous and non-endogenous considerable. The constitutively active GPCRs are useful for identifying antagonists, agonists and partial agonists for use as pharmaceutical companies. The mutant proteins are also useful in research settings for clucidating the roles of the receptors in normal and diseased and isoased conditions. Antagonists for a particular GPCR are useful for treating diseases and clisoates associated with that receptors. Because the novel mutant GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous ligands. The present sequence compounds without the need for endogenous ligands. The present sequence compounds without the need for endogenous ligands. The present council continuous hild cation of the invention. This was cloned and subjected to sitedirected mutagenesis (SDM) to generate DNA encoding the corresponding computant of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to screening a test compound to determine whether the compound is a GPR40 receptor (G protein-coupled receptor) ligand comprises detecting whether the test compound competitively inhibits the binding of a fatty acid GRR40 ligand to a GPR40 receptor. Also included are (1) a method of screening a compound for GPR40 antagonist activity, comprising; (a) measuring any detectable signal produced by a reporter gene (comprising a reporter gene under the control of G protein Gq responsive transcriptional element); (b) detecting a decrease in reporter gene expression in the presence of both test compound and agonist; or (c) detecting whether the compound decreases glucose-stimulated insulin release from mammalian pancreatic beta cells in the presence of a GPR40 agonist; (2) a method of screening a compound for GPR40 agonist; (2) a method of screening any

reporter gene expression; or (b) detecting whether the compound binds to GPR40 and increases glucose-stimulated insulin release from mammalian pancreatic beta cells. The method is useful for identifying GPR40 antagonist or agonist compounds for treating disorders e.g. type 2 diabetes, obesity, glucose or insulin intolerance, neurodegenerative disease (e.g. Alzheimer's disease) or stroke. The present sequence is the human cDNA for GPR40
                                                                                                                                                                                                                                                                                                                                                         180

New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or autoimmune diseases.

Disclosure, Fig 1; 523pp; English.

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino caids. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or articular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibody. The peptides and antibodies are also useful for detecting the presence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for disquesting and antibodies are useful for disquesting and designing drugs for gresence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for disquesting and designing drugs for treating immune-related diseases, growth-related disease, call creating immune-related diseases, growth-related disease, call creating immune-related diseases, growth-related call proliferative diseases, or autoimmune diseases, growth-related call proliferative diseases, and allergies, corder, full and acute inflammation, allergies, crohn's disease, diabetes, graft versus host anxiety, depression, schizophrenia, dementia, mental retardation, memory closs, epilepsy, asthma, tuberculosis, obseity, nausea, hypertension, or hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or

The invention relates to a method for treating a non-endogenous, constitutively active version of an endogenous human G protein-coupled receptor (GFCR) that Lransmembrane-6 (TM6) region and an intracellular-3 (IC3) region, by substituting a specific amino acid in the TM6 region with a different amino acid, and testing for constitutive activity. The method is useful for creating a constitutively active version of an endogenous human GFCR that comprises a transmembrane 6 region and an intracellular loop 3 region. The altered human GFCR compounds for identification of inverse agonists or partial agonists of GPCR polypeptides, which may have therapeutic uses. The altered GPCRs may also be used in vivo or in vitro in biological research. A nucleic acid encoding the altered GPCR may be used to create a transgenic animal expressing the altered GPCR remay be used to create a transgenic animal expressing the altered GPCR. The method allows screening for compounds that modulate the activity of human G protein-coupled receptor without the need for provision of a cidentification of a creening of compounds against orbhan receptors for which no ligand is currently known. This sequence represents cDNA encoding a human GPCR currently known.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Creating a constitutively active version of an endogenous human G protei coupled receptor (GPCR) comprises substituting a specific amino acid in the transmembrane-6 region with a different amino acid, and testing for

The invention relates to a novel screening method comprising a fatty acid and eicosanoid-binding G-protein coupled receptor protein, GPR40, originating in mouse, rat, crab-eating monkey and hamster (sequences fully defined in the specification), equivalent proteins of similar activity, and peptides containing partial sequences of the GPR40 protein. The novel fatty acid and GPR40 protein and their compositions have the following activities: antidiabetic, anabolic, neuroprotective, nephrotropic, ophthalmological, antilipaemic, dermatological, enfiatorior, ophthalmological, antilipaemic, dermatological, antiatritic, osteopathic, thrombolytic, noctropic, anorectic, hypotensive, and cytostatic. The novel fatty acid and eicosanoid-binding G-protein coupled receptor protein, GPR40, and clarance, and else and else and be used in the treatment, prevention and diapetes, ketosis, acidosis, diabetic neuropathy, diabetic nephropathy, diabetic retinopathy, hyperlipaemia, skin diseases, confidence, insulin allergy, fat metabolism disorders and cancer. This confidence is insulin allergy, fat metabolism disorders and cancer. This

antagonist; mutant; 88.

Non-endogenous constitutively activated human G protein-coupled receptors, useful for identifying agonists for use as pharmaceutical Example 2; Page 324; 341pp; English. Liaw CW; 98US-00170496 Chalmers DT, (AREN-) ARENA PHARM INC WPI; 2000-329165/28. P-PSDB; AAY90684. 12-OCT-1999; Behan DP, agents.

The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-CAAY90647) and AAY90689-A30743 and AAY9077 and AAY9069-A30743 and AAA30775-A30779). The mutant proteins of the invention contain a contain a material and transmembrane domain 6 (TM6). A non-endogenous anino acid, X, is substituted for an endogenous residue in IC3 at a position 16 amino acids N-terminal of an endogenous residue in IC3 at a position 16 amino acids N-terminal of an endogenous proline in TM6 to form a sequence X-contains and is preferably Lys. When the endogenous residue at this position is Lys, this residue is replaced by His, Arg or preferably Ala. The 15 amino acid stretch between the substituted amino acid and the Pro may be endogenous, non-endogenous, or a mixture of endogenous and non-endogenous cresidues. The constitutively active GPCRs are useful for identifying antagonists for a particular gponists for use as pharmaceutical containment proteins are also useful in research settings for a particular GPCR are useful for treating diseases and disorders associated with that receptors. Because the novel mutant GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous ligands. Sequences AAA30709-CPC AMA30773 and AAA30779-FA30779 represent DNAs encoding the mutant human GPCRs of the invention

The invention relates to a method for treating a non-endogenous, constitutively active version of an endogenous human G protein-coupled receptor (GFR) that has a transmembrane-6 (TM6) region and an intracellular-3 (IC3) region, by substituting a specific amino acid in the TM6 region with a different amino acid, and testing for constitutive curracellular-3 (IC3) region, by substituting a specific amino acid in the TM6 region with a different amino acid, and testing for constitutive activity. The method is useful for creating a constitutively active cursion of an endogenous human GPCR that comprises a transmembrane 6 region and an intracellular loop 3 region. The altered human GPCR polypeptides which may have therapeutic uses. The altered GPCRs may also be used to resten a transgenic animal expressing the altered GPCR. The wethor allows screening for compounds that modulate the activity of a human G protein-coupled receptor without the need for provision of a ligand for the receptor. This is particularly useful in allowing a currently known. This sequence represents cDNA encoding a human GPCR polypeptide of the invention.
Creating a constitutively active version of an endogenous human G protein coupled receptor (GPCR) comprises substituting a specific amino acid in the transmembrane-6 region with a different amino acid, and testing for

The invention relates to a novel screening method comprising a fatty acid and eicosanoid-binding G-protein coupled receptor protein, GPR40, coriginating in mouse, rat, crab-eating monkey and hamster (sequences tilly defined in the specification), equivalent proteins of similar activity, and peptides containing partial sequences of the GPR40 protein and their compositions have the following activities: antidiabetic, anabolic, neuroprotective, nephrotropic, ophthalmological, antilipaemic, dermatological, antiarteriosclerotic, hypotennive, and cytostatic. The novel fatty acid and eicosanoid-binding G-protein coupled receptor protein, GPR40, and further compositions can be used in the treatment, prevention and diagnosis of diabetes, ketosis, acidosis, diabetic retinopathy, hyperlipaemia, skin disease, carthritis, bone diseases, arteriosclerosis, thrombosis, hypertension, indigetion, memory loss, obesity, hypoglycaemia, edema, insulin resistance, insulin allergy, fat metabolism disorders and cancer. This protein of the invention.

The invention relates to a novel screening method comprising a fatty acid and eicosanoid-binding G-protein coupled receptor protein, GPR40, originating in mouse, rat, crab-eating monkey and hamster (sequences fully defined in the specification), equivalent proteins of similar activity, and peptides containing partial sequences of the GPR40 protein. The novel fatty acid and GPR40 protein and their compositions have the following activities: antidiabetic, anabolic, neuroprotective, nephrotropic, ophthalmological, antilipaemic, dermatological, entiarteriosclerotic, antiarthritic, osteopathic, thrombolytic, nootropic, anorectic, hypotensive, and cytostatic. The novel fatty acid and eicosanoid-binding G-protein coupled receptor protein, GPR40, and clarance, anorectic, hypotensive, and cytostatic. The novel fatty acid and eicosanoid-binding G-protein coupled receptor protein, GPR40, and clarance compositions can be used in the treatment, prevention and classes, ketosis, acidosis, diabetic neuropathy, diabetic retinopathy, hyperlipaemia, skin diseases, carthritis, bone diseases, arteriosclerosis, thrombosis, hypertension, indigestion, memory loss, obesity, hypoglycaemia, skin disease, insulin allergy, fat metabolism disorders and cancer. This polymucleotide sequence represents the DNA encoding a hamster GPR40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CGGCTGAACCTGTTGGCCATCCGAGGCGCCGTGGCCGTGCAAGGCTGCGGCTCACCCC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to screening a test compound to determine whether the compound is a GPR40 receptor (G protein-coupled receptor) ligand comprises detecting whether the test compound competitively inhibits the binding of a fatty acid GPR40 ligand to a GPR40 receptor. Also included are (1) a method of screening a compound for GPR40 antagonist activity, comprising; (a) measuring any detectable signal produced by a reporter gene (Comprising a reporter gene under the control of G protein GG responsive transcriptional element); (b) detecting a decrease in reporter gene expression in the presence of both test compound and agonist; or (c) detecting whether the compound decreases glucose-stimulated insulin release from mammalian pancreatic beta cells in the presence of a GPR40 agonist; (2) a method of screening a compound for GPR40 agonist; (2) a method of screening any compound for GPR40 agonist; (3) a method of screening any

GPR40 and increases glucose-stimulated insulin release from mammalian pancreatic beta cells. The method is useful for identifying GPR40 antagonist or agonist compounds for treating disorders e.g. type 2 diabetes, obesity, glucose or insulin intolerance, neurodegenerative disease (e.g. Alzheimer's disease) or stroke. The present sequence is mouse cDNA for GPR40

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and elcosanoid-binding G-protein coupled receptor protein, GPR40, originating in mouse, rat, crab-eating monkey and hamster (sequences fully defined in the specification), equivalent proteins of similar activity, and peptides containing partial sequences of the GPR40 protein. The novel fatty acid and GPR40 protein and their compositions have the following activities: antidiabetic, anabolic, neuroprotective, nephrotropic, ophthalmological, antilipaemic, dermatological, antiarthritic, osteopathic, thrombolyric, anotropic, antiarthritic, osteopathic, thrombolyric, and eicosanoid-binding G-protein coupled receptor protein, GPR40, and further compositions can be used in the treatment, prevention and diagnosis of diabetes, ketosis, acidosis, diabetic neuropathy, diabetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel screening method comprising a fatty and eicosanoid-binding G-protein coupled receptor protein, GPR40,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Patty acid and eicosanoid-binding G-protein coupled receptor protein GPR40 for control of pancreatic function and treatment of diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ito Y, Kobayashi M, Tanaka H, Okubo S;

and eicosanoid-binding G-protein coupled receptor protein, GPR40.

originating in mouse, rat, crab-eating monkey and hamster (sequences tully defined in the specification), equivalent proteins of similar activity, and peptides containing partial sequences of the GPR40 protein.

The novel fatty acid and GPR40 protein and their compositions have the following activities: antidiabetic, anabolic, neuroprotective, nephrotropic, optimal mological, antilipaemic, dermatological, antiartariosclerotic, antiarthritic, osteopathic, thrombolytic, notropic, anorectic, hypoteensive, and cytostatic. The novel fatty acid and elcosanoid-binding G-protein coupled receptor protein, GPR40, and closanoid-binding G-protein coupled receptor protein, GPR40, and elcosanoid-binding G-protein coupled receptor protein, GPR40, and elcosanoid-binding can be used in the treatment, prevention and diagnosis of diabetic retinopathy, diabetic neuropathy, diabetic retinopathy, hyposlipaemia, skin diseases, arteriosclerosis, thrombosis, hypertension, indigestion, memory loss, obesity, hyposlycaemia, edema, insulin insulin allergy, fat metabolism disorders and cancer. This polynucleotide sequence represents the DNA encoding a rat GPR40 protein of the invention.
                                                                                                                                                                                            fatty acid; eicosanoid-binding G-protein coupled receptor; GPR40; antidiabetic; anabolic; neuroprotective; nephrotropic; ophthalmological; antilipaemic; dermatological; antiarteritor; antiarteritic; osteopathic; thrombolytic; nocropic; anorectic; hypotenaive; cytostatic; diabetic; ketosis; acidosis; diabetic neuropathy; diabetic nephropathy; hyporlipaemia; skin disease; arthritis; bone disease; arteriosclerosis; thrombosis; hyportension; indigestion; memory loss; obesity; hypoglycemia; edema; insulin resistence; insulin allergy; fat metabolism disorder; cancer; rat; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              invention relates to a novel screening method comprising a fatty acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Fatty acid and eicosanoid-binding G-protein coupled receptor protein GPR40 for control of pancreatic function and treatment of diabetes.
